Atlanta Braves Holdings, Inc. (BATRA)

Fundamental analysis & five-year outlook | August 5, 2026 | Price $52.78 (close, Aug 5, 2026) | Market cap $3.39B | Dual/triple-class structure — see §2

The one-paragraph version. Atlanta Braves Holdings is two businesses under one ticker: a scarce, always-in-demand MLB franchise, and a fast-growing suburban real estate portfolio (The Battery Atlanta) anchored by Truist Park. The team is having a genuinely good year on the field — first place in the NL East at 68-45 — but that isn't the story investors got today. **Q2 2026 results, released this morning, showed operating income swing from +$42M to -$19M and Baseball-segment Adjusted OIBDA turn negative for the first time in this data set**, as the company's new in-house broadcast platform, BravesVision, added real costs before proving it can replace the revenue of the regional-sports-network deal it exited. Management said plainly on today's call that the added cost is **not a one-quarter blip — it's the new run rate**. Layer on a Major League Baseball lockout that is close to a formality once the CBA expires December 1, 2026, and near-term catalysts skew to the downside even as the long-run assets — the real estate, the franchise scarcity value underscored by the Padres' just-approved $3.9 billion sale, and a 2028 national-media renegotiation — remain genuinely attractive. **My view: this is a name worth tracking, not buying today.** The crux for a 10-year holder isn't whether the Braves are a good team or Battery Atlanta a good asset — both are clearly true — it's whether BravesVision proves out as a better economic model than the RSN deal it replaced, and that won't be known before the labor situation adds its own uncertainty on top.

A note on method

BATRA doesn't fit cleanly into any of the usual valuation boxes. Trailing GAAP EPS is negative (P/E is meaningless), and trailing Adjusted OIBDA is deflated by this quarter's transition costs (EV/OIBDA currently prices at ~63x, which says more about the trough than the business). I anchor primarily on **EV/Revenue** — sourced against the one clean public peer (MSG Sports) and against real MLB control-transaction prices — and build a bottom-up 5-year scenario framework rather than leaning on a single multiple. Both Baseball and Mixed-Use Development results are shown separately throughout, because they are genuinely different businesses with different capital intensity, seasonality, and margin profiles.

1. History, business model, and revenue mix

The short history

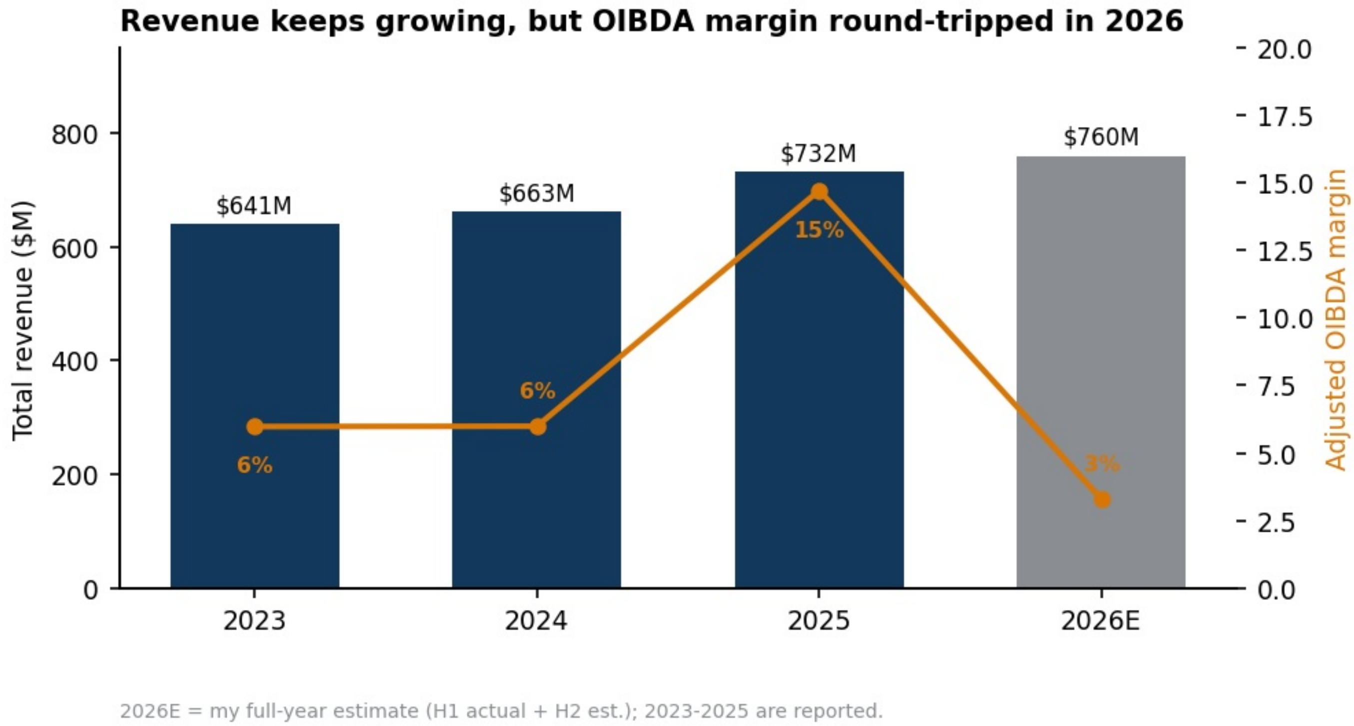
Ted Turner bought the Braves in 1976 as programming content for his Atlanta "superstation," WTBS — the team's national following predates cable sports as an industry. Liberty Media acquired the Braves from Time Warner in 2007 (an exchange valuing the club at roughly $450M) and ran it as a tracking stock for 16 years before splitting it off as a standalone public company, Atlanta Braves Holdings, in **July 2023**. The team opened Truist Park in Cobb County in 2017 alongside The Battery Atlanta — a deliberate bet that the club could capture real estate economics most franchises leave to outside developers, and the single decision that most differentiates ABH's business model from every other publicly traded sports team. The Braves won the 2021 World Series (their first title since 1995) but missed the playoffs in both 2024 and 2025. In **August 2024**, day-to-day control passed from Liberty-appointed officers to the Braves' own operating team, with longtime Turner/Braves executive **Terence McGuirk** becoming Chairman, President and CEO; John Malone remains the largest voting shareholder but granted McGuirk his voting proxy on routine governance matters (see §2).

Business model

Two distinct economic engines sit inside one holding company. The **Baseball** segment monetizes the team itself: ticket sales, concessions, sponsorships and suites ("baseball event" revenue); local and national broadcast rights ("media related" revenue, run through the newly launched BravesVision network as of the 2026 season); and retail/licensing. As of 2026 it also absorbs MLB's revenue-sharing plan, under which a winning, well-drawing team like the Braves pays more into the league pool rather than keeping all the marginal economics of success. The **Mixed-Use Development** segment is, in substance, a small and growing commercial real estate operator: Braves Development Company runs The Battery Atlanta, a 3-million-square-foot district next to the stadium — Class-A office (anchored by the newly acquired six-building Pennant Park complex), retail, restaurants, the Omni and Aloft hotels, the Coca-Cola Roxy concert venue, and 531 residences — earning rental income, tenant reimbursements, and parking/sponsorship revenue largely uncorrelated with whether the Braves win or lose.

Segments and revenue mix (FY2025)

Segment	Revenue	% of total	Key lines	Momentum
Baseball	$635.1M	87%	Ticket/concessions/sponsorship, local & national broadcast, retail	**+7% YoY (2025); media revenue -10% YoY in Q2'26**
Mixed-Use Development	$97.4M	13%	Office/retail rental income, tenant reimbursements	**+45% YoY (2025, Pennant Park); +26% H1'26**



Sources: ABH FY2023/2024/2025 press releases and 10-Ks; Q1-Q2 2026 press releases. 2026E is my full-year estimate (H1 actual, H2 estimated) — the company does not give quantitative full-year guidance.

The mix story

Mixed-Use Development's share of total revenue has grown from roughly 10% in 2024 to an estimated 15% in 2026, and it carries a structurally higher, steadier margin (roughly 65-71% Adjusted OIBDA margin) than Baseball, which is seasonal, capped by revenue-sharing, and currently absorbing the cost of standing up BravesVision. That's the genuine bull case in miniature: over a 10-year horizon, even modest continued real-estate compounding — via further acquisitions like Pennant Park or organic lease-up — pulls the overall mix toward the more stable, less binary-risk half of the business, partially insulating the equity from any one bad baseball season or a rocky BravesVision transition.

2. Moat and competitive landscape

Where the moat is real

- **Scarcity.** There are 30 MLB franchises and no expansion is imminent. BATRA is one of only two ways to buy public equity in a US major-league sports team (the other is Madison Square Garden Sports, MSGS). Real transactions keep clearing at rising prices: the San Diego Padres' sale to José Feliciano and Kwanza Jones was approved by MLB's owners on **August 4, 2026 — literally the day before this report** — at a record **$3.9 billion**, a premium to the ~$3.1B that CNBC's own revenue-multiple methodology had implied for that team just months earlier.
- **Real estate optionality most teams don't have.** Because ABH owns and operates The Battery Atlanta outright rather than leasing the surrounding land to a third-party developer, it captures both the team's ticket-and-media economics and the commercial rental economics of the district it created — with a visible acquisition pipeline (Pennant Park in 2025; management has signaled continued interest in similar deals).
- **Long-duration contracted revenue.** The company disclosed roughly **$1.2 billion** of revenue tied to performance obligations extending through 2041 (sponsorships, suites, multi-year season-ticket and lease commitments) — unusual forward visibility for either a sports team or a standalone real estate operator.

Where the moat is thinner than the bulls admit

- **BravesVision is unproven, and the first data point is bad.** The entire logic of taking local broadcast in-house is that the team keeps 100% of the economics instead of splitting them with a regional sports network — but that only pays off if BravesVision can replace lost carriage/distribution revenue with owned advertising, subscription and streaming revenue. In its first live quarter, **media-related revenue was down 10% year over year while the cost of producing and marketing it rose materially.** The "will meet or exceed prior RSN economics" framing that one outside analyst used in a pre-earnings note has not yet shown up in the actual numbers.
- **Baseball economics are structurally capped by revenue sharing.** Unlike an operating company where winning more customers scales margin, a good, well-drawing Braves team pays *more* into MLB's revenue-sharing and luxury-tax pools — management specifically cited "expenses related to MLB's revenue sharing plan" as an OIBDA drag this quarter. On-field success and shareholder margin are not as tightly linked as a naive read suggests.
- **Thin, illiquid float.** BATRA (Series A) trades roughly 76,000 shares a day on average — about $4M of daily dollar volume at today's price. That is not a liquidity profile that supports building or exiting a meaningful position without moving the market.
- **Governance is not shareholder democracy.** Malone and McGuirk together control roughly 47.5% of the vote through Series B supervoting shares (10 votes each) that almost no public holder can buy — only ~978,000 Series B shares exist. Public Series A and non-voting Series C (BATRK) holders are financially exposed but have negligible say in outcomes.

Peer comparison (Aug 5, 2026 close)

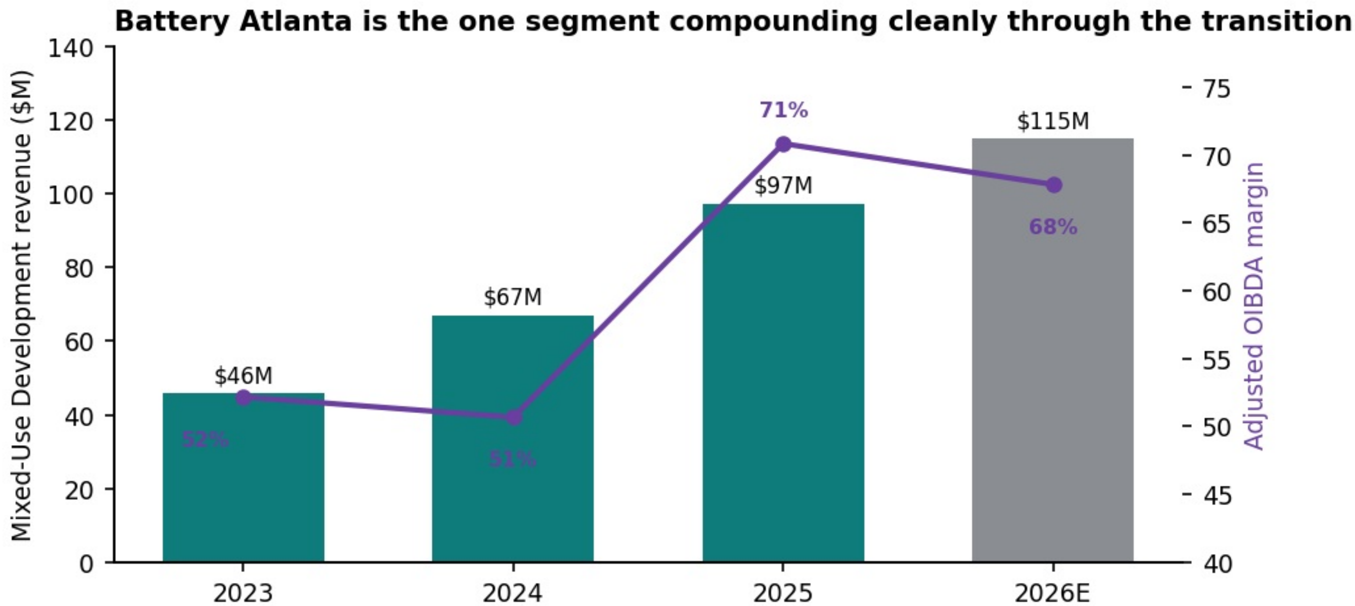
Company	Market cap	EV	TTM Rev	EV/Rev	Position vs BATRA
BATRA (Atlanta Braves Holdings)	$3.39B	$4.06B	~$750M	5.4x	Team + real estate + fledgling media platform; negative trailing GAAP earnings
MSGS (Madison Square Garden Sports)	$9.43B	~$10.5B	~$1.08B	~9.7x	Knicks + Rangers only, no real estate segment; richer multiple, similarly thin float and Dolan-family voting control; near-breakeven GAAP earnings

Sources: Robinhood live quotes (BATRA, MSGS), 8/5/26 close; MSGS EV/revenue from third-party aggregator data (approximate, may not be same-day for the debt/cash inputs). BATRA figures are my own calculation from the balance sheet above.

3. Growth drivers

Driver 1 — Battery Atlanta / Mixed-Use expansion (proven, compounding)

This is the base-case driver, not optionality. Mixed-Use Development revenue has grown from an estimated $46M (2023) to $97.4M (2025) to an estimated $115M (2026), with Adjusted OIBDA margins in the mid-60s to low-70s%. The April 2025 Pennant Park acquisition (763,465 sq ft of Class-A office, >80% occupied, anchored by Home Depot) did most of the heavy lifting in 2025's growth and continues to lease up (Juneau Construction doubling its footprint through 2037; Four Stones Group relocating its HQ there in late 2025). Cobb County's own tracking shows Battery-area tax revenue growing from $67,000 in 2014 (pre-development) to a level that now exceeds the county's annual stadium debt-service obligation — a credible, third-party-verified sign the district itself is a durable economic engine, independent of the team's win total.



2023-2024 figures are derived/approximate from disclosed totals; 2025 is reported; 2026E is my estimate.

Sources: company press releases (2025 figures reported); 2023-2024 figures derived/approximate from disclosed segment totals; 2026E is my estimate.

Driver 2 — BravesVision normalizing (optionality, not base case)

If BravesVision's carriage, advertising and streaming economics mature toward or past what the old FanDuel Sports/Main Street Sports RSN deal paid, this becomes a genuine margin driver rather than a drag — management's own estimate ahead of launch was 2026 broadcasting revenue "near or above $87M." The first quarter of real data (media revenue -10% YoY) argues for treating this as **optionality with a zero weight in the base case** until at least two more quarters of run-rate data are in.

Driver 3 — 2028 national media rights renegotiation

MLB's current national deals are a patchwork of short-term agreements: the new ESPN/NBC/Netflix package (2026-2028, ~$800M/year combined, actually a ~$300M/year *step-down* from the prior ESPN-only deal) plus the legacy Fox ($729M/year) and Turner ($470M/year) contracts, both of which also expire after the 2028 season. That stacks essentially all of MLB's national media rights into one renegotiation window in 2028-2029 — commissioner Rob Manfred has been explicit about wanting a more "national" rights structure going forward. Any team's 1/30th share of a larger combined national pool would flow straight to Baseball-segment revenue with minimal incremental cost. This is a 2028+ event, not a 2026-2027 one.

Driver 4 — On-field success / postseason optionality

At 68-45 and leading the NL East as of today, the Braves have real, near-term operating leverage to a deep playoff run: extra home games are close to pure incremental margin on already-fixed stadium and roster costs. But this is genuinely variable — the same team missed the playoffs each of the last two seasons — so I treat it as upside optionality, not something to underwrite in a base case.

4. Capital allocation

Item	Detail
Capex (organic)	$15.9M in H1 2026, down from $36.4M in H1 2025 (H1 2025 also included a separate $93.7M real estate acquisition — Pennant Park — that is not repeated in 2026)
Dividend	None. Never has paid one.
Buyback	None disclosed; the company has instead been a net share *issuer* — $27.5M raised from stock option exercises in H1 2026 alone
Balance sheet	$793.1M total debt (GAAP) at 6/30/26 vs. $116.3M unrestricted cash; debt/equity ≈1.5x. ~$486M is Mixed-Use Development mortgage-style debt against a growing rental stream; ~$309M is baseball-specific (League-wide credit facility, MLB facility fund, TeamCo revolver, term debt), much of it short-term/revolving and used for in-season working capital (player payroll timing, revenue-sharing settlements)

The honest read: this is a business in investment mode, not capital-return mode. Management is funding real estate acquisitions and a brand-new media business with a mix of debt draws and share issuance rather than paying down leverage or returning cash — a legitimate posture for a founder/control-family-run, scarce asset with a long horizon, but it means public shareholders aren't being paid anything to wait through the current transition, and per-share dilution from option exercises is a real, if modest, headwind.

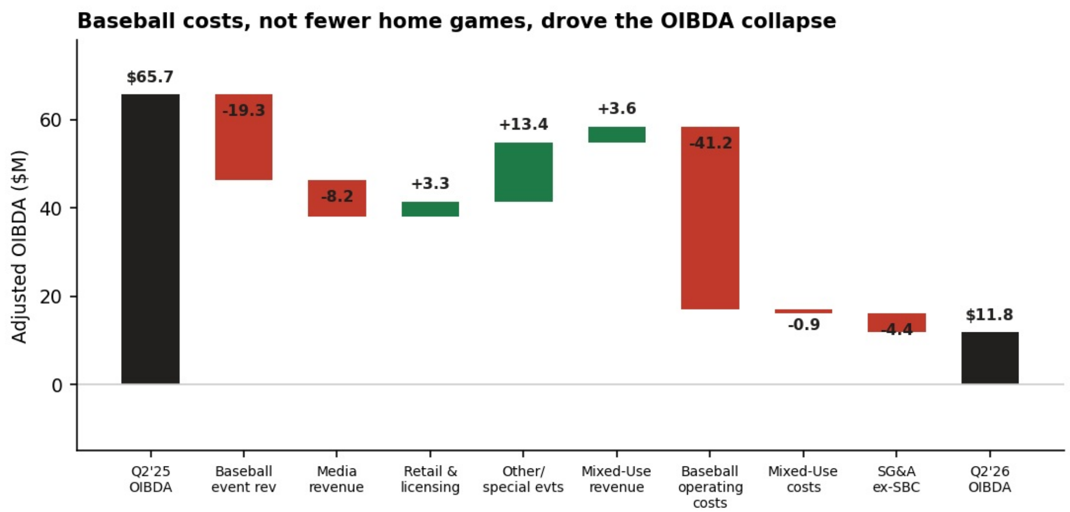
5. Financial deep dive

Five-year record

Fiscal year	2022	2023	2024	2025	2026E
Revenue ($M)	n/a	640.6	662.7	732.5	~760
Adjusted OIBDA ($M)	58.8	38.3	39.7	107.8	~25
OIBDA margin	—	6.0%	6.0%	14.7%	~3%
Net income (loss) ($M)	n/a	(125.3)	(31.3)	(23.4)	~(75)

Revenue CAGR 2023-2026E: ~6%. Adjusted OIBDA CAGR 2023-2025 (actual): +68%/yr, entirely reversed in H1 2026. 2026E is my full-year estimate (H1 is actual/reported; H2 is my projection) — ABH does not issue quantitative full-year guidance. 2022 revenue is not disclosed on a comparable standalone basis (pre-split-off Liberty Braves Group reporting).

> **Strip-the-noise: the OIBDA collapse is a cost story, not a "fewer home games" story.** The headline — Adjusted OIBDA down 82% YoY in Q2 2026 ($65.7M → $11.8M) — reads like a schedule quirk (six fewer home games). It isn't, mostly. Revenue effects nearly canceled out (-$19.3M from fewer games, -$8.2M from weaker media revenue, offset by +$16.7M from retail/licensing, special events and Mixed-Use growth — a net revenue drag of only $7.3M). **The real driver was a $46.6M increase in costs** — Baseball operating costs alone rose $41.2M on higher player salaries, BravesVision production/marketing, and MLB revenue-sharing. This is company-disclosed, not my estimate, and management confirmed on today's call that the BravesVision cost increase specifically is **ongoing, not one-time.**



Source: ABH Q2 2026 press release (8/5/26), Schedule 1 reconciliation. Baseball operating costs include BravesVision production/marketing, player salaries, and MLB revenue-sharing.

Source: ABH Q2 2026 earnings press release (8/5/26), Schedule 1 reconciliation of Adjusted OIBDA to GAAP operating income (loss).

Key metrics — current

Metric	Value	Comment
Trailing P/E	n/m (neg.)	Negative trailing GAAP EPS (~-$0.35); omitted as a valuation anchor for that reason
EV / TTM Revenue	5.4x	Primary valuation anchor given negative/depressed earnings and OIBDA this year
EV / TTM Adj. OIBDA	~63x	Not meaningful right now — TTM OIBDA (~$65M) is depressed by the Q2 transition-quarter trough; will re-normalize once BravesVision's run-rate stabilizes
Net debt / TTM Adj. OIBDA	~10.4x	High by normal operating-company standards, but ~61% of the debt is real-estate mortgage debt against a growing, contracted rental stream, not baseball leverage
Current ratio	0.49x	Weak on paper ($287.9M current assets vs. $585.9M current liabilities), but a large piece of current liabilities is revolving credit-facility draws that typically roll rather than require cash repayment
Dividend yield	0%	No dividend, ever. Irrelevant to the thesis either way given the portfolio's income is otherwise fully solved.

Owner earnings / cash-flow quality

H1 2026 owner earnings, using net loss plus D&A less organic capex (net loss $(52.7)M + D&A $40.6M − capex $15.9M), come out to roughly **$(28.0)M** — still meaningfully negative. That's the honest, unflattering number for the transition period; I'm not dressing it up. The bigger uncertainty is that ABH doesn't disclose a maintenance-vs-growth capex split, so I can't cleanly isolate how much of that $15.9M is "keep the lights on" spending on a 9-year-old ballpark and a growing office/retail portfolio versus discretionary growth spend. **This is a genuine known-unknown, not a modeled figure** — treat the owner-earnings number above as directionally useful for this transition half-year, not as a clean run-rate.

6. Key risks and red flags

Risk	Severity	Assessment
MLB lockout / CBA expiration	**HIGH**	CBA expires **December 1, 2026**. MLBPA leadership has called a lockout "all but guaranteed"; the fight is over a salary cap, which the union has never accepted. The 2021-22 lockout lasted 99 days and delayed Opening Day. Watch: any signs of a shortened or delayed 2027 season by mid-March 2027.
BravesVision underperformance	**HIGH**	First quarter of live data showed media revenue down 10% YoY with rising production/marketing cost. Watch Q3/Q4 2026 media revenue against the ~$81M/quarter the old RSN deal implied.
Thin float / governance	MED-HIGH	~76K shares/day average volume; Malone/McGuirk control ~47.5% of the vote via Series B shares public holders can't buy. Position sizing should account for both the illiquidity and the lack of shareholder leverage over capital-allocation decisions.
Revenue-sharing margin cap	MEDIUM	A winning, well-drawing team pays more into MLB's shared pools — structurally different from a normal operating company where growth scales margin. Watch the "MLB revenue sharing plan" cost line each quarter.
Single-metro real estate concentration	MEDIUM	Nearly all of Mixed-Use Development sits in one submarket (Cumberland/Cobb County, GA). A local office-market downturn would hit this segment disproportionately; Pennant Park's >80% occupancy is a reasonable current buffer.
Roster / single-season win-loss volatility	**LOW (often overstated)**	The market and financial media tend to frame the stock as a bet on this year's record. It shouldn't be. Missing the playoffs in 2024 and 2025 didn't stop 2025 revenue growing 11% or Battery Atlanta OIBDA growing 51%; the real estate and scarcity-value legs of the thesis are largely decoupled from any single season's win total.

Red flag worth its own paragraph: the bull case for BravesVision hasn't survived contact with its first quarter of data.

Every pre-earnings write-up on this name leaned on the same assumption: that taking local broadcast in-house would let the Braves keep 100% of the economics the old RSN deal used to split with a third party, and that 2026 broadcasting revenue would land "near or above $87M" for the full year. The first real quarter says otherwise — media-related revenue fell 10% year over year, and management attributed part of that to "the timing of revenue recognition under BravesVision linear distribution agreements" and a shift of some digital rights to MLB Advanced Media rather than to the team directly. Meanwhile the cost side of the ledger moved decisively against the company: Baseball operating costs rose 20% YoY, with BravesVision production, sales and marketing spending explicitly called out, and CFO Jill Robinson told analysts on today's call that platform expenses will **remain elevated for the rest of the season and into the off-season** — not a one-quarter launch cost. What this means, stripped of spin: the company took on real execution risk and real near-term cost to control its own broadcast destiny, and one quarter in, the revenue side of that bet hasn't shown up yet. It may well arrive as carriage deals mature and streaming subscriptions build — but that is a forecast, not a fact, and it is the single biggest swing factor in this name over the next 12 months.

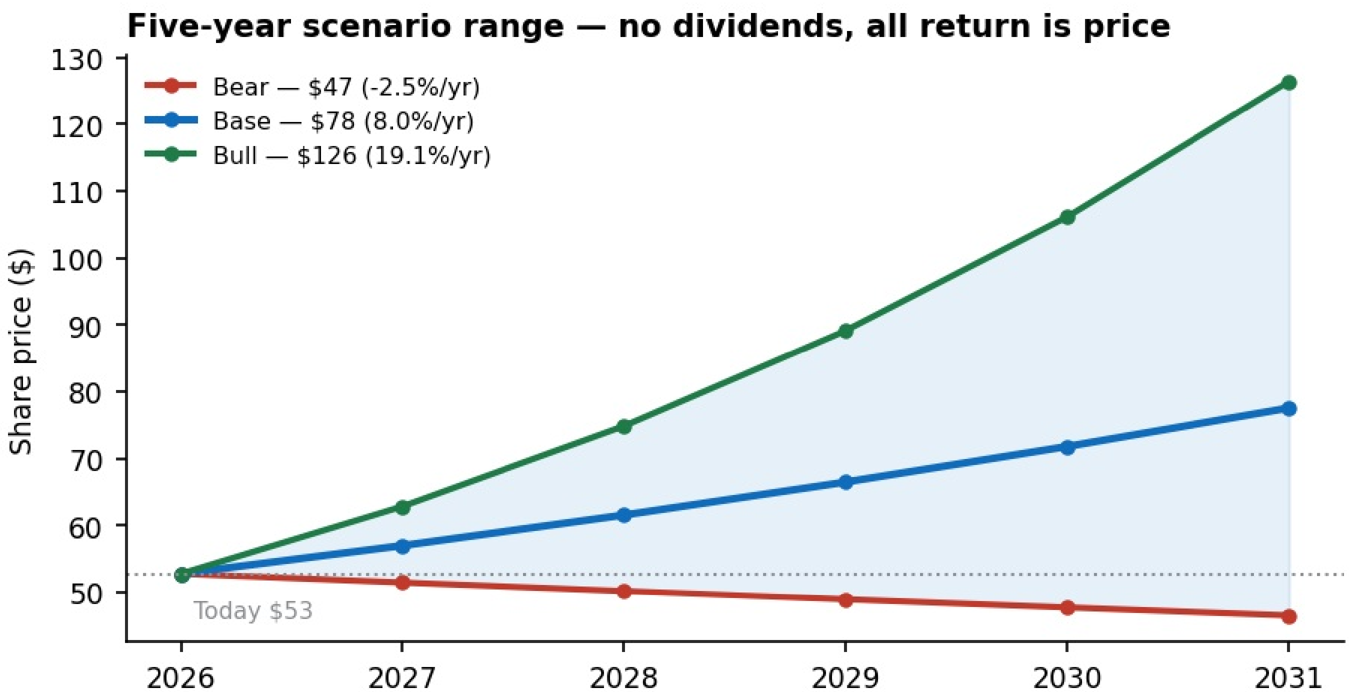
7. Valuation and five-year outlook

The setup. At $52.78, BATRA trades at 5.4x EV/TTM revenue, well below MSGS's ~9.7x — but MSGS has two teams in the country's largest media market, no real estate segment (and no BravesVision-style transition risk), and near-breakeven GAAP earnings versus BATRA's meaningfully negative trailing figure. Against real transaction prices, the Padres just sold for $3.9B, ahead of what a pure revenue-multiple approach would have implied for a similar-tier market — a signal that private buyers may be willing to pay more for franchise scarcity than public multiples currently reflect, though that premium says nothing about the real estate or media legs of ABH's story.

Five-year scenarios

Scenario	2031 Rev	OIBDA margin	Exit EV/Rev	Net debt	2031 price	5-yr IRR
Bear — CBA disruption; BravesVision underdelivers structurally	$880M	10%	4.5x	$750M	$46.45	**-2.5%**
Base — BravesVision stabilizes near old RSN economics by '28; Battery Atlanta keeps compounding	$1,050M	15%	5.75x	$680M	$77.53	**+8.0%**
Bull — BravesVision exceeds legacy deal; deep playoff runs; re-rating toward MSGS-like multiple	$1,250M	19%	7.5x	$650M	$126.26	**+19.1%**

IRR excludes dividends (BATRA pays none). **My assumptions, not consensus** — no meaningful sell-side coverage exists on this name (I found one Seeking Alpha contributor BUY rating and a single Citigroup Neutral initiation at a $45 target from June 2026).



What is priced in at $52.78?

Solving for a 10% five-year IRR: the stock needs to reach ~$85 by 2031, which requires an EV of roughly $6.55B against my base-case 2031 revenue of $1.05B — an EV/Revenue multiple of **6.24x, up only modestly from today's 5.4x.** Equivalently, holding today's multiple flat, revenue would need to compound at 10.0%/year from here, roughly the pace of my bull case. **Neither path requires a heroic assumption** — a 10% return is achievable through modest multiple recovery on base-case growth, or bull-case growth at an unchanged multiple. That's a genuinely constructive reverse-check, and it's the strongest part of the bull argument. It doesn't, however, address the near-term question of whether the multiple re-rates *before* or *after* the market gets clean evidence on BravesVision and the CBA outcome.

Sensitivity: the exit multiple is the crux

2031 exit EV/Revenue	2031 price	5-yr IRR
4.50x	$58.54	**+2.1%**
5.00x	$66.13	+4.6%
5.42x (today's multiple, unchanged)	$72.52	+6.6%
6.00x	$81.33	**+9.0%**
6.50x	$88.93	**+11.0%**
7.50x (MSGS-adjacent re-rating)	$104.12	**+14.6%**

Illustrative only — base-case 2031 revenue ($1,050M) and net debt (~$680M) held fixed; only the exit multiple varies. The takeaway is the shape: return outcomes here are far more sensitive to how the market chooses to value this asset five years out than to the specific revenue-growth assumption within a reasonable range.

Fit with your portfolio's growth objective

Yield is irrelevant to this decision either way — BATRA pays no dividend, and your income needs are already covered by the pension, so that's a wash, not a knock. What matters more given the 10-year horizon and growth mandate: this is a genuine diversifier away from the mega-cap tech and financials concentration in the current book (AMZN, JPM, GS, AAPL, MA, MSFT, META, AVGO) — sports/media/regional-real-estate exposure doesn't correlate meaningfully with any of those. It also doesn't overlap with SCHD, VXUS, or the AVUV factor sleeve. The honest tension is between the quality of the underlying assets (scarce franchise, proven real estate compounder) and the quality of the entry point (a name with real near-term catalyst risk — CBA, BravesVision — that a patient buyer could plausibly get at a better price in the next two to six months). Given the existing portfolio already carries several small, unproven "watch" positions sized like toe-holds (GEV, GRID, SOXQ), BATRA would fit that same bucket well if initiated — not as a core or build position.

The three things to actually watch

1. **BravesVision media revenue run-rate.** Currently down 10% YoY. If Q3/Q4 2026 media revenue doesn't at least stabilize toward the old ~$81M/quarter RSN-deal level, the "meets or exceeds prior economics" bull case is dead for this cycle.
2. **December 1, 2026 CBA deadline.** A lockout is widely expected; watch whether it resolves before the historical drop-dead date (~mid-March) for preserving a full 2027 season.
3. **Further Battery Atlanta acquisitions or lease-up.** Continued expansion at Pennant Park-like economics (>80% occupancy, blue-chip tenants, immediately accretive) would confirm the one leg of the thesis that's already working and reduce reliance on BravesVision proving out on schedule.

Bottom line

I would not initiate a position in BATRA today, and if I already owned it, today's print and the standing CBA risk would keep me from adding. That's not a call on the quality of the underlying assets — the Braves are a well-run, scarce franchise and Battery Atlanta is a genuinely proven, compounding real estate business — it's a call on **timing and price**. The market has not yet had to fully digest a quarter where the media-transition bet showed its first negative data point, and a near-certain labor stoppage sits four months out with real potential to affect 2027 revenue. Both are the kind of resolvable uncertainty that a patient, 10-year holder can simply wait through at very little opportunity cost, given how thin and idiosyncratic this name's trading is anyway.

If forced to have exposure today, I'd size it the way the portfolio already treats GEV, GRID and SOXQ — a small, explicit "watch" position, not a build position — and I'd want to revisit after Q3 2026 earnings (early November) once there's a second data point on BravesVision and more clarity on the CBA negotiating posture. The reverse-check is genuinely encouraging (a 10% return doesn't require heroic assumptions), but "not heroic" is different from "already cheap enough to look past two live, dated catalysts that could both go the wrong way before year-end."

Sources & disclosures. Primary: ABH Q2 2026 earnings press release and Schedule 1/2 reconciliations (8/5/26); ABH Q1 2026, FY2025, Q3 2025, Q2 2025 press releases; ABH FY2023 and FY2025 Form 10-Ks; ABH Form 10-Q (Q1 2026); SEC Schedule 13D and corporate governance update filings (Malone/McGuirk voting arrangements); Q2 2026 earnings call transcript (Investing.com). Secondary: CNBC 2026 MLB Team Valuations; Sportico, ESPN, CBS Sports, Bloomberg (Padres sale); Sportico/SportsVideo.org/MLB.com (BravesVision launch); Fox News/Yahoo Sports/NBC News/ESPN (MLB CBA and lockout outlook); Bisnow, Cobb County government (Battery Atlanta); stockanalysis.com, GuruFocus (MSGS market data). Market data: Robinhood live quotes, BATRA and MSGS, as of 8/5/26 market close.

Known uncertainties, stated plainly: (1) 2026E full-year figures (revenue, Adjusted OIBDA, net loss) are my own estimate — ABH gives no quantitative full-year guidance; (2) 2022-2024 segment-level revenue/OIBDA splits are derived/approximate from disclosed totals, not directly reported by the company at that granularity; (3) MSGS's enterprise value and net-debt figures come from third-party aggregator data that may not be perfectly same-day with the 8/5/26 share price used; (4) I could not obtain a maintenance-vs-growth capex split from ABH's disclosures, so the owner-earnings figure in §5 should be read directionally, not precisely; (5) my 5-year scenario model uses an EV/Revenue exit-multiple framework of my own construction, not a DCF or a consensus estimate, because no meaningful sell-side coverage exists on this name; (6) the Q2 2026 stock-price reaction figures cited in secondary sources (premarket moves, specific %) were sourced from news aggregators, not verified against a tick-by-tick feed; (7) this report was completed the same day as the Q2 2026 earnings release and conference call — any incremental color from the call beyond what's quoted here, or any subsequent 8-K, would not yet be reflected.

This is educational research and analysis, not investment advice. I am not a licensed financial or tax advisor, and nothing here recommends buying or selling any security. The scenario models are assumptions that will be wrong in ways I cannot anticipate. Position sizing and tax consequences should be

decided by you, ideally with a fiduciary who can see your whole balance sheet.
